

CONNECTRANS

Innovative Transportation Management

Your single source transportation solution throughout North America.

What does "Innovative Transportation Management" mean to you as a Connectrans customer?

It means: Connectrans will continuously strive to tailor cost effective transportation programs suited to your specific requirements.

over the road

LTL & TL over the road transportation within Canada and between all points in Canada & USA is a core competency at Connectrans. Transportation programs tailored to your specific requirements, coupled with custom reporting provide the information necessary to minimize your transportation expenditure.

expedited

When standard transit time just isn't good enough, Connectrans offers time sensitive services ranging from direct drive over the road, or a combination of road & air. From an envelope, or engineered prototypes personally delivered via on-board air courier, to chartered aircraft transporting a critical shipment needed to keep your manufacturing plant in motion, our experienced team delivers the time-critical service you require.

intermodal

Intermodal double-stacked containers are one of the most economical ways to transport your products. FCL between Canada & USA provides a cost effective alternative to over the road transportation.

specialized

When your situation demands special handling and specialized equipment, Connectrans has the resources to ensure your shipment is managed professionally. From temperature controlled vans to flatbeds, including over dimensional shipments, Connectrans is capable of aligning the proper equipment with your transportation requirement.

international air & ocean

Connectrans strategic alliance with an international freight forwarder provides a direct link to effectively manage your international air & ocean LCL & FCL shipments.
